Hard Drives: What to Do about Volume BTREE Structure Problems

=====
Article Created: 13 August 1991

TOPIC -----

Even though there is plenty of room, suddenly my hard drive says I have no space left on the disk. There are no viruses, and rebuilding the Desktop doesn't help.

Norton Utilities tells me that:

- It can't read BTREE header
- The Volume bit map is incorrect
- The Volume info blocks have errors

DISCUSSION -----

You're experiencing Volume BTREE Structure Corruption. When this happens, the hard drive needs to be reformatted. It is possible for software to bomb or crash hard enough to cause format structure damage to the hard drive. This is one of the main reasons we strongly suggest frequent backups.
