TOPIC -------------------------------------------------------------

How do I get a Macintosh Hard Disk 20 to format as an HFS volume?

DISCUSSION --------------------------------------------------------

Select the Macintosh Hard Disk 20 volume and choose Erase Disk in the
Special menu.

You can to see if formatting was successful if there are the two thin lines
near the top of the disk window.  If you see a one-pixel dot at the left side
of those two lines, it is an HFS volume.
