Article Last Updated:

TOPIC -----

Apple introduced a new version of the Macintosh II NuBus Ethernet Card in December 1990, replacing the old version. Both boards have the same part number: M0410LL/A.

What is the difference between the two cards?

DISCUSSION -----

Whenever Apple Manufacturing changes a board layout or card design these are considered "revisions". In the case of the December 1990 revision, it was a board layout change. There were no changes to functionality or power requirements.
