TOPIC -----------------------------------------------------------

I want to use my Apple IIGS with a Personal LaserWriter NT.  How can I get
various fonts and styled text (sizes, underline, bold, and so on)?

DISCUSSION ------------------------------------------------------

Obtain AppleWorks GS from Claris. That version of AppleWorks supports
printing using the ROMs in the LaserWriter, giving you various point sizes
and font types in PostScript.  Without this software you are limited to the
one font.

On AppleLink, you can find contact information on a company mentioned in
this article by clicking the "Library Index" button in the lower-center of
the Tech Info Library search window, then opening the "Third Party Company
Directory" folder.
