DAL: How to Use the "\$col" Function in a C Program

=====

Article Created: 20 August 1991

Article Last Updated:

TOPIC -----

I tried to use the "\$col" function from within a C program using the example in the DAL documentation, but it did not work. The "\$col" function is supposed to return the number of columns in the selected rowset.

DISCUSSION -----

The example in the DAL documentation is not complete. Put the code into a DAL program string and do `clsend("program text")`.
