TOPIC -----------------------------------------------------------

How do I find the burned-in address of the Token Ring card?

DISCUSSION ------------------------------------------------------

The IEEE 802 committee has assigned Apple the address range 5000E0000000 to
5000EFFFFFFF.  To determine the "burned-in" address, start with the lowest
number of this range and add to it the serial number on the card (after
converting it to hex).  The result will be the burned-in address of the
card.
