AppleShare 3.0: Using 2.0.x Workstation Software

=======================================================================

Article Created: 15 October 1991

TOPIC -----------------------------------------------------------

This article explains the limitations of using AppleShare 2.0.x workstation
software with AppleShare 3.0 server software.

DISCUSSION ------------------------------------------------------

AppleShare 2.0.x clients and System 7 clients can access AppleShare 3.0
servers, but can't use the new features of AppleShare 3.0.  If a user with
an expired password logs on to an AppleShare 3.0 server, that user's old
workstation software doesn't support the extended security, and he or she
won't be able to log on.  The new workstation software gives a message and
the opportunity to enter a new password.
