TOPIC -----

Is it possible to record 16-bit and 44kHz CD quality on a Quadra 700 or 900?

DISCUSSION -----

The Quadra's sound input is 8-bit linear PCM with analog limiting to enhance the power of the signal being digitized. The sample rate may be 22kHz or 11kHz. Therefore, to achieve 44kHz input, you'll need to obtain third-party hardware and software tools, such as those from Digidesigns, Inc. Information on Digidesigns' offerings may be found in buyer's guides, including the electronic buyer's guides on AppleLink.

To locate a vendor's address and phone numbers, use the vendor name as a search string.
