TOPIC ---

I know that I can use standard IIci-style 80ns memory in the LaserWriter
IIf and IIg. Can I safely use slower memory (for example, 100 or 120 ns)?

DISCUSSION --

No. Both the LaserWriter IIf and IIg require IIci-style RAM, rated at
80ns or better and supporting Fast Page LaserWriter IIf and IIg: Require 80ns
RAM
