Macintosh Quadra: Ethernet Buffer Size

======================================================================

Article Created: 5 November 1991
Article Last Reviewed: 5 August 1992
Article Last Updated:

TOPIC -----------------------------------------------------------

How large are the Ethernet buffers on the Macintosh Quadra computer's
built-in Ethernet?

DISCUSSION ------------------------------------------------------

The send and receive buffers for the Macintosh Quadra computer's built-in
Ethernet are 8 packets each.  The maximum packet size is 1500 bytes, so
that is 8 x 1500, which equals 12,000 bytes each.
