PowerBook 100: RAM Expansion Card Compatibility 8/92

===

Article Created: 23 December 1991
Article Reviewed/Updated: 3 August 1992

TOPIC ---

What memory cards can I use in the PowerBook 100?

DISCUSSION --

You can use Apple PowerBook memory cards (2MB or 4MB cards) in any of the
Macintosh PowerBooks.

However, third party cards designed for the Macintosh PowerBook 140 and 170 are
not necessarily compatible with the PowerBook 100 because the 68000 has a 16-bit
data path, whereas the 68030 can handle 32 bits. The PowerBook 100 requires
additional signal lines on the memory card to do addressing correctly. In
addition, the physical form factor may not be the same.
