MacX 1.1.7 Font Error

=====

TOPIC -----

I've encountered a problem using MacX 1.1.7 and MacTCP 1.1 on a Macintosh IIfx using system software versions 6.0.5 and 7.0. I used it to display the Euclid program (CAD 2D and 3D). After launching the program, I got the message:

```
"X Toolkit Warning: Cannot convert string
"--*-MENU-MEDIUM-R-Normal--*-120--*-P-*ISO8859-1" to type FontList, using
fixed point."
```

Do you have any suggestions?

DISCUSSION -----

Here are some possible causes of this problem:

- The proportional font "--*-MENU-MEDIUM...." doesn't exist in the Font Directory file or MacX Fonts folder. Select Fonts from the Edit menu to verify that this font exists.
- The Font Directory file might be out of sync due to improper removal of fonts or font aliases.

We suggest that you reload the MacX fonts from the MacX 1.1.7 distributed disks, (especially the "Font Directory"), and launch MacX again.
