PowerBook: Fax Monitor Status Prevents Sleep (11/94)

=====
Article Created: 27 March 1992
Article Reviewed/Updated: 11 November 1994

TOPIC -----

I've noticed that when Fax Monitor Status is the foreground application, the PowerBook won't go to sleep, even if the status is idle.

DISCUSSION -----

This has been corrected so that the PowerBook will enter sleep mode if the Fax Monitor status is Idle. If, however, it is waiting for a call, the PowerBook will not go into sleep mode.
