TOPIC ---

Using Digital PATHWORKS and a LaserWriter Plus, the Palatino font option
characters don't come out right. For example, a "bullet" comes out as a
"%" sign.

DISCUSSION --

Digital told us that this is a known problem, and you need to set the
printer to 8-bit mode. Here are two PostScript files to do this. Print the
following two files in the PATHWORKS directory:

msa$root:[msa.msap$utility] to your printer to set the printer to 8-bit
mode:

msap$set_params.ps
msap$show_params.ps

The second file prints a confirmation sheet on the printer.
