Apple Two-Page Monochrome Monitor: Description (Discontinued)

=====

Article Created: 26 May 1992

TOPIC -----

This article describes the Apple Two-Page Monochrome Monitor.

DISCUSSION -----

The Apple Two-Page Monochrome Monitor (M0402) is a high-quality, high-resolution, 21-inch monitor that can display two pages of text and graphics plus the Macintosh menus and scroll bars. This monitor is suited for page layout, desktop publishing, engineering and scientific applications, and higher education applications, especially for users of the A/UX operating system.

Features

- Active display area measures 15 inches horizontal by 11.3 inches vertical
- 1,152 by 870 pixel resolution at 77 dots per inch
- 75Hz refresh rate
- Flat antiglare screen

To enhance gray scaling, the Macintosh II Video Card Expansion Kit (M0213) is available as an option.

Order Number

- Apple 2-Page Monochrome Monitor
M0402
