Ofoto for Windows: Out of Memory Error in 16-bit Video

=====

Article Created: 22 December 1992

TOPIC -----

Since I upgraded my 486-based PC to 16-bit video, I get an out of memory error when trying to run Ofoto for Windows. I tried to re-install Ofoto, but the installation crashes with a video driver error. When I returned to 8-bit operation, it worked OK.

DISCUSSION -----

Ofoto for Windows runs only on systems with video displays running at 1 bit, 4 bits or 8 bits. It does not run at thousands or millions of colors.
