StyleWriter II: Compatibility with Apple IIf Card (3/93)

=====

Article Created: 18 March 1993

TOPIC -----

Is the StyleWriter II compatible with the Apple IIf Card?

DISCUSSION -----

Yes, when using version 2.0 or later of the Apple IIf Card software, the StyleWriter II is compatible with the Apple IIf Card.

With version 2.0 or later of the IIf Card software, all printing requested from the Apple IIf Card environment is sent from the "printer slot" to the Macintosh Print Manager. Any printer, therefore, that is compatible with the Macintosh Chooser is compatible with the Apple IIf Card.

To check which printer the Apple IIf Card will print to, follow these steps:

- 1) From the Apple IIf environment, bring up the IIf Option Panel by pressing the Control, Command, and Escape keys at the same time. You will see icons representing the configurable parts of the IIf environment.
- 2) Double-click the Printer Card icon on the left side of the Option Panel. This will produce a screen which will display (among other things) which printer the IIf Card will print to.
