PowerBook Duo: Video Setting Default (3/93)

=====

Article Created: 3 March 1993

TOPIC -----

My PowerBook Duo 230 is connected to the Macintosh Duo Dock, with an E-Machines ColorLink Video card and Apple monitor. If the Duo is removed from the Dock, and then returned to the Dock, it doesn't "remember" the previous setting and starts up in monochrome. Why is this?

DISCUSSION -----

The System software's Start Manager expects to see the specified card installed, and when the Duo is not docked it defaults to the first available video resource, which is the Duo's built-in monochrome display.
