Personal LaserWriter NT: SuperATM Message and ROM Upgrade (3/93)

==

Article Created: 9 March 1993

TOPIC ---

A README file from Adobe's SuperATM application reads: "If you are using an
Apple Personal LW NT printer which does not have upgraded ROMS from Apple,
your application may not be able to print substitute fonts. Please call
customer support for assistance."

Is there a ROM upgrade for the Personal LaserWriter NT?

DISCUSSION --

Adobe Systems, Inc. told us that this message concerns the ability to use the
Substitute Font functionality (part of the Multiple Master Font technology) of
SuperATM. SuperATM uses new technology not present in the version of ROM that
is in the Personal LaserWriter NT. Thus, customers must upgrade to a
Personal LaserWriter NTR if they want to use this specific function.

Adobe has included an addendum sheet in their SuperATM package which also
states this.

There are no plans to provide a ROM upgrade for the Personal LaserWriter NT.
