DAL Server For AS/400: Pricing Basis For Server (3/93)

===

Article Created: 18 March 1993

TOPIC ---

Is the pricing based on concurrent users on the DAL Server or number of
Hosts with DAL client installed?

DISCUSSION --

Pricing for the server is based on the number of simultaneous client
connections. There are three sizes:

- 1 to 8 users
- 1 to 32 users
- over 32 users

The cost of the client varies by the number of clients purchased. You must
also purchase a separate DAL client product, version 1.3.7, for each user's
Macintosh. This is not the Developer's Toolkit product, but is a separate,
less expensive client product that includes the Client, the DAL Tester,
the Network Adapters, and an installation manual for information on client
network connections.
