System 7: Optimizing Hard Disk Space with Virtual Memory (4/93)

===

Article Created: 14 April 1993

TOPIC ---

I attempted to free up some space on my hard drive, so I dragged more than
7MB of files into the Trash. Even after I emptied the Trash, the Finder
showed less than 1MB free. Can you explain?

DISCUSSION --

Look in the Control Panels folder under Memory. Check to see that you
haven't set your Virtual Memory allocation to its maximum. If you turn
Virtual Memory off (or down a bit), and restart the computer, you should
have more free space on your hard drive.
