AppleCD 300: SCSI-2 Support (5/93)

=====

Article Created: 11 May 1993

TOPIC -----

Is the external AppleCD 300 compatible with the SCSI-2 interface standard?

DISCUSSION -----

The external AppleCD 300 drive does use the industry standard SCSI-2 interface. This standard addresses both the electrical interface and command protocols to this drive.

NO Macintosh systems, however, support the SCSI-2 standard interface at this time.
