Performa 400: Printing to a Citizen Swift 200 (8/96)

======================================================================

Article Created: 21 June 1993
Article Reviewed/Updated: 27 August 1996

TOPIC -------------------------------------------------------

Can I connect a Performa 400 to a Citizen Swift 200 centronics printer? Would
the Macintosh Print Pack be of any benefit?

DISCUSSION -------------------------------------------------

Apple was unable to obtain any information on the Citizen Swift 200 printer
since it is a European product. We contacted Citizen USA and they referred us to
Citizen Europe Corporation for any questions related to the Citizen Swift 200
printer. Citizen Europe Corporation can be reached (from the USA) by calling at
011-44-753-584-111. They are located in the United Kingdom.

However, if the Citizen Swift 200 printer can emulate an Epson (FX or LQ), Kodak
(Diconix 701), or Canon (BJ-10ex) standard then the Macintosh Print Pack will
work for your customer.  Here are the specific drivers included with the Print
Pack and the types of printers they support:

Driver/standard    Printer Type
----------------   --------------
Epson FX           9-pin dot matrix printers or some line printers
Epson LQ           24-pin dot matrix printers
Canon BJ-10ex      Compact/Portable Ink-Jet printers
Diconix 701        Compact/Portable Ink-Jet printers

These drivers are all selectable in the Chooser.  The Print Pack also comes with
a serial to parallel cable (din8 to Centronics) for the hardware interface.
