Performa and System 7.5: Turning Off Layer Hiding (6/95)

=====

Article Created: 16 June 1993  
Article Reviewed/Updated: 19 June 1995

TOPIC -----

I have just purchased a Performa 405 computer that uses System 7.1P. I also use a Macintosh that uses regular System 7.1. How can I turn off the feature in System 7.1P that hides all open programs and the Finder when I launch a different program?

DISCUSSION -----

There is a feature in System 7.x for the Performa and for System 7.5 called layer hiding. This feature hides the background windows, showing only the active window.

System 7.5  
=====

Under System 7.5, layer hiding is part of the General Controls control panel. To prevent layer hiding:

- Step 1: Open the General Controls control panel.
- Step 2: Click the Show Desktop In Background box.
- Step 3: Close the Generals control panel.

After you close the General Controls control panel, you need to restart your computer

Older Versions of System 7.xP  
=====

System 7.01P, 7.1P, and 7.1P2  
-----

## ..TIL12393-Performa\_and\_System\_7-5-Turning\_Off\_Layer\_Hiding\_6-95.pdf

Under these versions of the Performa system software, the layer hiding feature is built into the Launcher application.

To prevent layer hiding, remove the Launcher control panel from your Control Panels folder. If you place the Launcher control panel in another location, you can still use it, but the layer hiding feature is disabled.

After you move the Launcher control panel, you need to restart your computer.

System 7.1P3, 7.1P5, and 7.1P6  
-----

Under these versions of the Performa system software, the layer hiding feature is built into the Performa control panel. To prevent layer hiding:

Step 1: Open the Performa control panel.

Step 2: Click the Finder Hiding button.

Step 3: Close the Performa control panel.

After you close the Performa control panel, you need to restart your computer.

### Article Change History:

19 June 1995 - Corrected incorrect control panel nomenclature

21 Feb 1995 - Added keyword; made minor technical updates.

16 Dec 1994 - Added information on System 7.1P3 and above.
