Kid Pix: When New Software Doesn't Have Enough Memory to Open

=====
Article Created: 22 June 1993

TOPIC -----

I just bought Kid Pix, and when I try to launch the program I get a message that there isn't enough memory to open it.

DISCUSSION -----

Memory Requirements for Kid Pix may have been set wrong at the factory. Choose Get Info in the Finder File menu to see if the Minimum and Preferred size are lower than the Suggested size. Set BOTH Minimum and Preferred size to the Suggested size.

The product currently ships through the Educator Advantage program.
