Personal LW LS: Supports Grayscale (5/94)

======================================================================

Article Created: 21 July 1993
Article Reviewed/Updated: 24 May 1994

TOPIC -------------------------------------------------------------

Is there a way to do grayscale printing from a Personal LaserWriter LS? I just
bought it, and it works great for text, but most of the graphics don't look
very good.

DISCUSSION --------------------------------------------------------

To print grayscale, you need to use the Personal LaserWriter 300 driver, Chooser
v 7.3, and Personal LaserWriter LS Prep. These items are on the Personal
LaserWriter 300 installer disk and the GrayShare Update disk.

Extension             Version
---------             -------
Personal LW LS Prep   1.0
LaserWriter 300       1.2
Chooser               7.3

Article Change History:
17 May 1994 - Corrected article to include support for grayscale support.
24 May 1994 - Added GrayShare Update disk to article.
