Performa: Using Japanese System or KanjiTalk (7/93)

===

Article Created: 21 July 1993

TOPIC ---

I own a Performa 450. I understand this machine will only boot from System
7.1. Does that mean I cannot run the Japanese System or KanjiTalk?

DISCUSSION --

You cannot run the Japanese System or KanjiTalk on your Performa 450 because
those applications are incompatible with System 7.1. However, Apple has
released the Japanese Language Kit that provides you with the ability to use
Japanese applications and Kanji with System 7.1. Complete details of this
product can be found by searching under "Japanese Language Kit."
