Newton Connection Kit for Macintosh: Installing Packages (7/93)

==

Article Created: 30 July 1993

TOPIC ---

This article explains how to install a package onto Newton using the Newton
Connection Kit for Macintosh.

DISCUSSION ---

A package is a file that adds features to your Newton. They may be
applications, fonts, forms, collections of information or other software.

To install a package:

1) Connect your Newton to the Macintosh that has the package on it.

2) On your Macintosh, double-click the Newton Connection icon to open it.

3) Click the Install Package button.

4) In the box that appears, choose the package you want to install, and click
   Open.

5) Open the Extras drawer on the Newton.

6) Tap the Connection button.

7) In the box that appears, choose serial or AppleTalk to reflect the mode of
   connection you used when linking the Newton and Macintosh.

8) Tap Connect.
