Newton MessagePad: Scheduling Birthdays w/Assistant (8/93)

===

Article Created: 19 August 1993

TOPIC ---

How can I schedule a birthday as a repeating appointment based on the
 information in my Newton MessagePad's Names file?

DISCUSSION --

To schedule a birthday as a repeating appointment based on the information in
your Newton's Names file, do the following:

In the Notepad, write "Birthday", followed by the person's name and their
birth date, then tap Assist.

For instance, if Lisa is in your Names File and her birthday is 6/27, write
"Birthday Lisa 6/27", then tap Assist.

This will fill out a schedule slip for an appointment with Lisa's name in the
Who blank that repeats every year on 6/27. Also, an alarm will be set for 10
days prior to the birthday date.
