Newton MessagePad: Changing Letter Styles

=====
Article Created: 19 August 1993

TOPIC -----

My lower case t's look like the plus symbol (+) when I write them on my Newton MessagePad. I would like to teach Newton to not recognize the plus symbol by selecting Rarely in the Letter Styles Preferences Menu for that character.

When I click the Rarely button, it always goes back to Sometimes. Why is this?

DISCUSSION -----

There is only one choice for the plus symbol in the Letter Styles Preferences Menu. Whenever there is only one choice for a particular character or symbol in the Letter Styles Menu, you cannot set that choice to Rarely.

This was a design decision, since you have to be able to write each character in a form that Newton's recognizer can understand.
