Peter & Santa Claus CD: Configuration Requirements (12/93)

===

Article Created: 2 December 1993

TOPIC ---

Why do I get an alert stating that I need 256 colors and 640x480 pixel
resolution to run Peter & Santa Claus?

DISCUSSION ---

Answer:

1) Peter & Santa Claus requires a resolution of at least 640x480 pixels.
    An Apple 12 inch RGB display does not support this resolution. This
    may be why you are receiving this alert. You must use a 13 or 14 inch
    RGB display or larger. If you are using a large enough monitor,
    perhaps you are running in something other than 256 colors.

2) Peter & Santa Claus requires 256 colors to run. You can set your
    Macintosh to run under 256 colors by going to the Monitors Control
    Panel and selecting 256 colors. If you do not have 256 colors
    available to you, you need to buy more VRAM, or a video board that
    supports 256 colors.
