Travelrama: System Requirements (11/95)

=======================================================================

Article Created: 17 December 1993
Article Reviewed/Updated: 30 November 1995

TOPIC -------------------------------------------------------------

What are the system requirements of Travelrama?

DISCUSSION --------------------------------------------------------

The Travelrama game has the following system requirements:

1) A Macintosh LC III computer or other color Macintosh with a 68030 or faster
   processor (68040 recommended), 4 megabytes of memory (5 megabytes
   recommended), and System 7.1 or later.

2) A Macintosh-compatible 13-inch or larger RGB monitor which displays at
   least 640 by 480 pixels and 256 colors.

3) A Macintosh-compatible CD-ROM drive (double-speed CD-ROM drive
   recommended).

4) 2000K minimum allocated memory (2300K preferred) to run the game.

Number of Colors
----------------
If your Macintosh computer is not set to 256 color mode, you will receive an
error message.  To set your Macintosh to display 256 colors, follow these
steps:

1) Select Control Panel from the Apple Menu, then double-click on Monitors.

2) Select 256 and click on Color in the Monitor Control Panel, then close the
   control panel by clicking the close-box.

If your Macintosh does not support 256 colors, you must add VRAM or a video
```

board that supports 256 colors.

Number of Pixels
----------------
If your monitor does not display at least 640 by 480 pixels, you will receive
an error message.  You must attach such a monitor to your Macintosh to play
Travelrama.

Memory
------
If you do not have enough memory available, your system may suddenly "crash"
or stop operating.  If this happens, follow these steps:

1) Go to the Finder and select About this Macintosh from the Apple Menu.  The
   largest unused block must be at least 2000K.

2) If you do not have this much memory, remove extensions and/or control
   panels that are not needed to run Travelrama.

Note that using Virtual Memory will cause Travelrama to run irratically and
is not recommended.
