Power Macintosh and ApplePhone Are Not Compatible (3/94)

=====
Article Created: 1 March 1994

TOPIC -----

I just installed the GeoPort Telecom Adapter Express Modem software and ApplePhone application on my Power Macintosh. I now get a message that says it's not supported on this hardware. Why?

DISCUSSION -----

ApplePhone accesses the Macintosh 660AV and 840AV computers Digital Signal Processor (DSP) directly. The Power Macintosh AV computers do not have a DSP, resulting in ApplePhone software not running.
