Modem Cables Requirements for ARA 2.0 (3/94)

==

Article Created: 4 March 1994

TOPIC ---

This article describes modem cable requirements for ARA 2.0.

DISCUSSION ---

Most modems require a cable that supports the data terminal ready (DTR) signal. In addition, certain modems require a cable that supports CTS/RTS hardware flow control.

To support DTR, the cable must connect pin 20 on the DB-25 connector to pin 1 on the Mini DIN-8.

To support CTS/RTS, the cable must connect pin 5 on the DB-25 connector to pin 2 on the Mini DIN-8 and pin 4 on the DB-25 connector to pin 1 on the Mini DIN-8.

See your modem vendor or Apple-authorized dealer about obtaining the necessary cable.
