Power Macintosh: New Control Panels (3/94)

=====

Article Created: 10 March 1994

TOPIC -----

This article describes the changes made to the Monitors and Memory Control Panels.

DISCUSSION -----

The Monitor Control Panel has been modified so a change in the desktop (moving of the menu bar for example) takes affect either after restart or upon close of the control panel. This option is selected using the radio button located on the bottom left hand corner of the window.

With the new Memory Manager (called Modern Memory Manager), there is a modification to the Memory Control Panel. It is possible to disable this new Memory Manager and revert to the old Memory Manager in ROM for software compatibility. This is done through the Modern Memory Manager section in the Memory Control Panel. The default setting is using the new Memory Manager.
