A/UX 3.0: Quadra 950 Serial Port Problem (3/94)

=====  
Article Created: 15 March 1994

TOPIC -----

The serial port, and sometimes the Quadra, freezes up when I use lp, then cancel the spooled job.

DISCUSSION -----

The Quadra 950 running A/UX 3.0 using the System V spooler (lp) to a serial printer has the same problem that the Macintosh IIfx had running A/UX 2.0.

As with the Macintosh IIfx, you must use the Serial Switch (1.1) set to compatible mode to successfully use the System V spooler on the Quadra.
