Performa Basics: Can't Access Quit Button (4/94)

===

Article Created: 6 April 1994

TOPIC ---

When running Performa Basics, I am unable to access the Quit button, or the
guidance buttons. There is about an inch at the top of the program that has
nothing in it.

DISCUSSION --

You probably have 640x400 video mode turned on in your Monitor Control Panel.
Open your Monitor Control Panel, and reset the monitor back to "Macintosh High
Resolution" and restart. That will return your system to 640x480, and Performa
Basics should run fine.
