Power Macintosh Upgrade Card: RAM Upgrade Information (1/95)

=====
Article Created: 8 April 1994
Article Reviewed/Updated: 27 February 1995

TOPIC -----

I have a Macintosh with the Power Macintosh Upgrade Card installed. To upgrade the memory of the base computer, do I need to add memory in pairs of SIMMs like in the full Power Macintosh models?

DISCUSSION -----

No, the Power Macintosh Upgrade Card does not override the memory upgrade requirements of the base computer. You can upgrade the base computer using the existing memory upgrade requirements for that particular computer.

Article Change History:
27 Feb 1995 - Revised title slightly.
09 Jan 1995 - Clarified that upgrade info related to base computer.
