Newton Connection Kit: No Export Into ClarisWorks Database 4/94

=====

Article Created: 18 April 1994

TOPIC -----

Does the Newton Connection for Macintosh support import/export of data from ClarisWorks database files?

DISCUSSION -----

The Newton Connection File does not support a direct translation into the ClarisWorks database module. The ClarisWorks database can export data as tab delimited text, so you can use the Newton Connection Kit to create an import/export option for ClarisWorks.

The ClarisWorks database module cannot import text data into a database file, so you cannot export data from the Newton MessagePad into a ClarisWorks database file.
