PowerBook 540: Identifying Global Village Modem Configs (5/94)

=======================================================================

Article Created: 13 May 1994

TOPIC -------------------------------------------------------------

This article describes how to identify whether a Global Village Modem was
bundled from Apple with a PowerBook 540 Computer, or whether it was purchased
separately.

DISCUSSION --------------------------------------------------------

Configuration with Modem Installed by Apple
-------------------------------------------

PART NUMBER AND DESCRIPTION              LAST 3 DIGITS OF SERIAL NUMBER

M3120LL/A CPU PowerBook 540  12/240         2SZ
M3121LL/A CPU PowerBook 540c 12/320         2T0  (0=zero)

Configuration Without Modem
---------------------------

PART NUMBER AND DESCRIPTION              LAST 3 DIGITS OF SERIAL NUMBER

M2807LL/A CPU PowerBook 540  4/240          28Q
M2809LL/A CPU PowerBook 540c 4/320          28V
M1845LL/A CPU PowerBook 520  4/160          154
M2597LL/A CPU PowerBook 520c 4/160          1XN

How to distinguish a modem if it has been removed from the PowerBook:

A modem which was configured at the Apple factory will have a small Apple logo
on the modem and the DAA.

A modem that was purchased retail will NOT have the Apple logo on the modem or
the DAA.
