Macintosh: Cause of Programmer's Window (5/95)

=====
Article Created: 16 May 1994
Article Reviewed/Updated: 24 May 1995

TOPIC -----

Shortly after starting up my Macintosh computer, a window appears on the screen with a ">" mark. What is causing this?

DISCUSSION -----

If the Power Key on the keyboard is pressed and held down for more than approximately 1 second during startup of a Macintosh computer, the first time the Command key is pressed the computer initiates an interrupt and opens the Programmer's Window.

Macintosh Computers That Utilize The CUDA ADB

This problem MAY occur on any Macintosh system that utilizes the CUDA ADB processor, including the following computers:

- Macintosh Color Classic
- Macintosh LC 520
- Macintosh LC 55X
- Macintosh LC 57X
- Macintosh LC 58X
- Macintosh Quadra 630
- Macintosh Quadra 840AV
- Macintosh Quadra 660AV
- Power Macintosh 6100
- Power Macintosh 7100
- Power Macintosh 8100
- Power Macintosh 5200/75 LC

NOTE:

The symptom is most likely not reported in the Macintosh Quadra 660AV or the Power Macintosh 6100 since they do not have soft power and cannot utilize the

Power Key to startup.

The CUDA ADB processor contains an address register that includes information about the state of the Power Key. If the Power Key is held too long at startup, its status is locked as "on". Therefore the computer believes that the Power Key is down and the first time the Command key is pressed it opens the Programmer's Window. This condition can also occur after startup if a control panel or application initiates an ABD REINIT command and then the Power Key is pressed.

Solution

The solution to this problem is to tap (and quickly release) the Power Key at startup. Do not press and hold down the Power Key during startup.

Workaround

You do not have to restart if the Programmer's window does appear. Follow these steps to get out of the Programmer's window:

Step 1

Type in the letter g.

Step 2

Press the RETURN key. The computer will resume normal operation (in other words, you will be back in the Finder).

Article Change History:

24 May 1995 - Added more computers to the list and how to get out of the Programmer's window.

08 Mar 1995 - Added Quadra 630 and reworded AV-specific text.
