Emergency Disks: How To Create A Usable Emergency Disk (5/94)

=====================================================================

Article Created: 16 May 1994

TOPIC -----------------------------------------------------------

How do I build an emergency disk for my Performa computer?

DISCUSSION ------------------------------------------------------

Several third party companies produce utility type programs, some of these are:
• Norton Utilities
• Central Point Tools
• 5th Generation's 911

Most of these programs come with an emergency disk that allows you to startup
your Macintosh computer from a floppy disk instead of the hard disk. In the fall
of 1992, Apple started using System Enablers with all new Macintosh computers.
The emergency disks provided by most utility type programs do not include the
system enablers you need to use the emergency disks. You need to either install
the proper System Enabler from your system folder on your hard disk to the
emergency disk, or follow the instructions provided with the utility application
program.

a currently list of enablers is available in the document titled "System
Enablers: Current Versions & Change History"
