Newton MessagePad: Error -48204, -48205 on Mystery Capers (5/94)

=====
Article Created: 19 May 1994

TOPIC -----

When I launch Starcore's Columbo's Mystery Capers from the Extras drawer of my Newton MessagePad, I get an error message of -48204 or -48205 after the startup splash screen appears. Why?

DISCUSSION -----

This error occurs if the demo version of Columbo's Mystery Capers is installed, then the full version on the ROM card is installed. This error occurs even if the demo version is removed prior to installing the full version.

You must completely remove the preference entry from the Newton MessagePad to fix this problem. In order to remove the preference entry, you must use the application CapersFix.pkg. This application is available through online services and through the Apple Assistance Center at (800) SOS-APPL.
