QuickDraw GX: X appears through icon at Startup (10/94)

======================================================================

Article Created: 11 October 1994

TOPIC -------------------------------------------------------------

Why is there an 'X' through the Quickdraw GX icon at startup and a message that
states the 'graphic component of QuickDraw GX is missing' ?

DISCUSSION -------------------------------------------------------

Usually, the load order of extensions has changed though the use of a third
party extensions manager, or some of the QuickDraw GX components have been
renamed.

If the ColorSync extension loads after the QuickDraw GX extension, then this
message appears.

To correct this problem, change the load order of the extensions back to factory
default.
