External Apple Hard Drives from LaCie: Software (4/95)

===

Article Created: 13 October 1994
Article Reviewed/Updated: 03 April 1995

TOPIC ---

What software is installed on the Apple external hard drives manufactured by
LaCie, Ltd.?

DISCUSSION --

Apple external hard drives manufactured by LaCie, Ltd., ship with the following
pre-installed software:

• Apple HD SC Setup v.7.2
• Disk First Aid v.7.1.1
• Safe & Sound v.1.01 (Central Point)
• Central Point Backup v.2.0a
• DiskDoubler v.3.7.7i (Symantec)

These units come in 160MB, 230MB, 500MB, and 1GB configurations.

Additionally, these units utilize Quantum hard drive mechanisms and Apple ROMs,
and ship with the following:

• 1 external pass-through terminator
• 1 standard high-quality SCSI cable
• Silverlining Utilities diskette

The Silverlining utilities are not currently pre-installed on the hard drive,
but come on diskette.

The Silverlining hard disk driver is pre-installed on the hard drive, as is
Apple's driver. Though Apple's driver is the default driver, the Silverlining
software (and only this software) can be used to engage the Silverlining driver
in a process termed a "friendly takeover." Until the Silverlining software is
used in this manner, however, the unit will remain an Apple drive and will

continue to appear so to Apple HD SC Setup.

Article Change History:
03 Apr 1995 - Corrected wording of Silverlining.
