PowerBook File Assistant: When It Is Installed (11/94)

=====
Article Created: 18 November 1994

TOPIC -----

- 1) I bought System 7.5 and installed it onto my Quadra. I cannot locate PowerBook File Assistant. Wasn't this part of 7.5?
- 2) I would like to custom install PowerBook File Assistant onto my PowerBook though I do not see it listed as an option.

DISCUSSION -----

- 1) System 7.5 includes PowerBook File Assistant for file synchronization and PowerBook battery management. It is intended for PowerBook computers and will only install onto a PowerBook. If you have both a PowerBook and a desktop machine, you can install it onto the PowerBook and then copy it over to the desktop machine.
- 2) There is not a custom install option for PowerBook File Assistant in the 7.5 installer. Users will need to do a regular Easy Install for it to install again. After the installation, it will be located on the hard drive inside the Portables folder which resides in the Apple Extras folder.
