At Ease 2.0.3 for Workgroups: Setting Up (8/95)

=====
Article Created: 5 January 1995
Article Reviewed/Updated: 14 August 1995

TOPIC -----

The following instructions are provided to help you set up your network using AppleShare 3.0.3 and At Ease for Workgroups 2.0.3, they assume a good understanding of how AppleShare works (please see the manual).

DISCUSSION -----

AppleShare 3.0.3 setup

Please follow the manual for installing and setting up the AppleShare server software. DO NOT install At Ease on the server, however you will need to create a user (for example, "At Ease User") that has write access to the root level of the shared volume. This user can be restricted (via AppleShare Admin) to the access of the folders on the shared volume, but must have at least write privileges to the root level).

If you have designated an administrator's Macintosh for the At Ease workgroup, set up that computer first (any of your workstations could be used for this), to look just as you would like other users' computers to look, since you will be putting the same information on all the computers in the workgroup. If you are using At Ease on an AppleTalk network, you can set up the other computers in the group from the administrator's Macintosh.

To begin, double-click the At Ease Setup for Workgroups icon on the startup disk. A window will appear, indicating that At Ease is turned off. Do not turn At Ease on yet. You will turn it on when you have completed the setup procedure.

Designating a File Server

At Ease will need to have a single AppleShare ID in order to access a file server. There is no relationship between the At Ease user names and the

AppleShare user names.

If At Ease uses the AppleShare volume as the startup disk:

- All At Ease users will be using the same AppleShare name and password.
- At Ease remembers the AppleShare name and password from when you set it up and automatically connects to the server when At Ease users log into At Ease on the workstation.

To designate a file server as the At Ease disk:

- 1) Choose Chooser from the Apple menu.
- 2) Use the AppleShare user name (again "At Ease User" is recommended) to connect to the file server that you want to use as the At Ease disk.
- 3) Select the name of the server volume that you want to use as the At Ease disk. Close the Chooser window.
- 4) Go back to the At Ease Setup program and choose At Ease Disk... from the Options menu.
- 5) Click the radio button next to Mounted Server, then select the server you're using. Click OK.

Adding Users

Create a list of all the users who will have access to At Ease, and enter their names. To do this:

- 1) Open the At Ease Setup program on the startup disk (it may already be open).
- 2) Click New to add new users.
- 3) Type the name of the first new user, and a password (optional). If you add a password, be sure to notify the user that you have done this.
- 4) Click Next User to add another user. When you have added all the users, click Done.
- 5) A list with all the users you added appears. At this point, you can remove any users by selecting their names and clicking Remove if necessary.
- 6) Click Done.

CREATING A SETUP

A Setup is a subsection of the entire workgroup that will be using At Ease. Each Setup consists of users who are all associated by definition (a class, a business team, a company division). All the users in a single Setup have access

to the same programs, menus, and options within At Ease.

Naming a New Setup

- 1) Click New in the At Ease Setup window.
- 2) Type the name of the new Setup in the box.

Adding Users to a Setup

- 1) Click the Users button.
- 2) Click the name of the user(s) you want to add to this Setup, and click Add. Click OK when you are done.

Adding Programs and Documents to a Setup

- 1) Click the Items button.
- 2) Click Add Applications.

NOTE: Please be aware that most software licensing agreements require a separate copy for each user, therefore, having one legal copy accessed by many users is still a violation of the agreement

- 3) Click the pop-up menu to see all available disks from which you can select applications.
- 4) Click the name of the program(s) you want to add, then click Add. The names that appear under "Items for this Setup" are actually aliases for the originals, which remain in their original location. (Users do not need to have the actual application on their systems to have access to items on a file server in an AppleTalk network.)
- 5) Click OK when you are done.
- 6) Click Add Documents.

NOTE: You cannot add a common folder from the server. You can, however, add your folder (for example, Clip Art) to the user folder in the Documents folder on the root level of the server hard drive. It will then appear as a folder in the user's document page in At Ease. Please be aware that At Ease works similar to the Finder, if you click on a document and it cannot find the application that created it, it will tell you this. You will then have to open the application (such as ClarisWorks) that supports it and then open the document from the application's Open... menu selection.

- 7) Click the Disk pop-up menu to see all available disks from which you can select documents.
- 8) Click the Kind pop-up menu and drag down to the application that created the document(s) you want to add. A list of documents created in

that application and available on the disk you selected (in the Disk pop-up menu) appears.

9) Click the document(s) you want to add, and click Add.

10) When you are done adding documents, click OK.

NOTE: If you do not know the full name or location of an item you want to add to the Setup, Click Find Items in the New Setup window and type the name or partial name of the item. Click Find. Click Add to add the item to the Setup.

11) Click OK when you are done.

Choosing Menus and Options for a Setup

The administrator can control what users are able to do from their desktops by configuring the menus for each Setup.

1) Click the Menus button in the At Ease Setup window.

2) Click the box next to the item you want to make available to users of this Setup. An X appears next to the menu items available to users of this Setup.

3) Click the Options button in the At Ease Setup window.

4) You can set other options for the users of the setup.

Updating the other Workstations

Please refer to page 91 of the At Ease for Workgroups Administrator's Guide for directions.
