Newton OS: General Performance Hints (2/95)

===

Article Created: 6 February 1995

TOPIC ---

I have an Apple MessagePad and it seems slow particularly when moving between
folders. Is there anything I can do to improve performance?

DISCUSSION --

To help increase performance, the first thing you should do is clean up your
folders and notes. You should also limit the number of folders you have to seven
(7). Doing these two things helps improve the overall performance of the Newton
OS.
