Power Macintosh Upgrade Card: Blank Desktop at Start Up (2/95)

=====
Article Created: 21 February 1995

TOPIC -----

After installing Power Macintosh Upgrade Card in my Centris 650, my extensions load properly on startup but the desktop comes up blank.

Restarting in 68040 mode works fine. What is the problem?

DISCUSSION -----

If you have a Radius Lemans GT card installed, you will need to reconfigure the card properly to match the Power Macintosh hardware (after switching to PowerPC mode) by holding down the letter "u" on startup.

You may wish to contact Radius should the problems persist.

To locate a vendor's address and phone number, use the vendor's name as a search string in the Tech Info Library.
