LocalTalk Bridge 2.0: Apple MessagePad Connectivity (6/95)

=======================================================================

Article Created: 8 June 1995

TOPIC -----------------------------------------------------------

I've got an Apple MessagePad which has built in LocalTalk, and an Ethernet
network in my office. How can I get my Apple MessagePad to work with Ethernet
devices?

DISCUSSION ------------------------------------------------------

Apple MessagePad users often want to print to Ethernet printers or access the
Connection kit on Macintosh computers on Ethernet.

The LocalTalk Bridge 2.0 should work in your situation. This software will allow
devices on LocalTalk (including the Apple MessagePad) to see Ethernet devices
(like LaserWriter printers or Macintosh computers running the Newton Connection
kit).

Remember to set you Newton Connection Kit preferences to "allow connection via
network" and do not configure "allow connection via serial port to use the
printer port".
